🕵️ Mr. White: The Mutation 🦠

Welcome to the ultimate social deduction experience. **Mr. White: The Mutation** is a high-stakes, fast-paced party game that blends the classic "Undercover" mechanics with a unique, dynamic **Mutation System**.

🎮 Game Concept

In a world of secrets, most are **Stable**—civilians holding a shared secret word. However, among them lurks an agent known as **Mr. White**, and a group of **Infected Parasites** whose very thoughts (words) are shifting.

The goal? **Stable players** must find and eliminate Mr. White. **Mr. White** must survive and blend in. **Infected players** must adapt to their changing words without being detected as imposters.

🚦 Complete Game Flow

1. 🏠 Home Screen (The Gateway)

The entry point of the game. Here you can:

- **Access Rules**: Tap the ❓ icon to understand the mechanics.
- **Adjust Settings**: Tap the ⚙️ icon to configure reveal times, discussion timers, and visual preferences (Animations/High Contrast).
- **Start Game**: Press the "Enter" button to move to setup.

2. 📝 Setup Phase (Lobby)

The Host prepares the mission:

- **Player Registration**: Add 3 to 10+ players.
- **Difficulty Selection**:
  - 🟢 **Easy**: Distinct, simple words.

    - 🟡 **Medium**: Closely related concepts.
    - 🔴 **Hard**: Abstract or highly specific word chains.
- **Mr. White Hints**: Choose what Mr. White sees:
    - `Imposter` : They see "IMPOSTER" (Hardest).
    - `Category` : They see the broad category (e.g., "CATEGORY: FRUITS").
    - `Related Word` : They get a word related to the Stable word.
- **Game Mode**:
    - **Normal**: Classic social deduction.
    - **Mutation**: Words for Infected players shift every round.

3. 👁️ The Reveal (Security Check)

The phone is passed around. Each player taps their name to see:

- **Their Secret Word**.
- **Their Identity Status** (Stable, Infected, or Mr. White).
- *Note: This screen has a timer and a "Hide" function to ensure privacy.*

4. 🗣️ The Discussion (Clue Phase)

The most intense part of the game.

- **Turn-Based Clues**: Players take turns giving a **single word clue** that describes their secret word without giving it away to Mr. White.
- **Host Control**: The host manages a timer.
- **Mutation Pulse**: If playing in **Mutation Mode**, the host can trigger a "Next Round" which might cause the Infected players' words to mutate into the next stage of the chain!

5. 📋 The Vote (Elimination)

Suspicions reach a boiling point.

- Players select who they believe is an imposter.
- **Elimination Result**: A dedicated screen reveals if the ousted player was **Stable**, **Infected**, or the elusive **Mr. White**.

6. 🏆 Victory or Defeat (End Game)

- **Stable Victory**: The group successfully identifies and eliminates Mr. White.
- **Mr. White Victory**: Mr. White survives until only 2 players remain.

- **Session Scores**: The game tracks wins across multiple rounds for a competitive session.

🧬 The Mutation Mechanic

Exclusive to this version, the **Infected** role adds a layer of chaos:

- Infected players start with the same word as the Stable players.
- As rounds progress, there is an increasing chance (`Round Number * 25%`) that their word will **Mutate**.
- They must subtly shift their clues to match their new word while convincing others they are still "Stable".

🛠️ Technical Features

- **Dynamic Theme Engine**: The background and UI color schemes automatically shift to match the mood of the game phase (e.g., Chill Blue for Setup, Danger Red for Voting).
- **Smart Word Chains**: Hand-curated word sets designed to create linguistic ambiguity.
- **Responsive UI**: Optimized for both mobile "pass-and-play" and desktop hosting.

🚀 Getting Started

1. **Clone & Install**:

   ```
   npm install
   ```

2. **Launch Mission**:

   ```
   npm run dev
   ```

Good luck, Agent. Trust no one—not even your own words.
